       mencoder [options] file1 [specific options] [file2] [specific options]

DESCRIPTION
       mplayer  is  a  movie  player  for Linux (runs on many other platforms and CPU architectures, see the documentation).  It
       plays most MPEG/VOB, AVI, ASF/WMA/WMV, RM, QT/MOV/MP4, Ogg/OGM, MKV, VIVO,  FLI,  NuppelVideo,  yuv4mpeg,  FILM  and  RoQ
       files, supported by many native and binary codecs.  You can watch VCD, SVCD, DVD, Blu-ray, 3ivx, DivX 3/4/5, WMV and even
       H.264 movies, too.

       MPlayer supports a wide range of video and audio output drivers.  It works with X11, Xv,  DGA,  OpenGL,  SVGAlib,  fbdev,
       AAlib, libcaca, DirectFB, Quartz, Mac OS X CoreVideo, but you can also use GGI, SDL (and all their drivers), VESA (on ev-
       ery VESA-compatible card, even without X11), some low-level card-specific drivers (for Matrox, 3dfx  and  ATI)  and  some
       hardware MPEG decoder boards, such as the Siemens DVB, Hauppauge PVR (IVTV), DXR2 and DXR3/Hollywood+.  Most of them sup-
       port software or hardware scaling, so you can enjoy movies in fullscreen mode.

       MPlayer has an onscreen display (OSD) for status information, nice big antialiased shaded subtitles and  visual  feedback
       for  keyboard  controls.   European/ISO8859-1,2 (Hungarian, English, Czech, etc), Cyrillic and Korean fonts are supported
